Homework 10
Laura E Grooms

While working with TinkerCad, I really liked the simplicity of the application. The circuits are easier to learn on here because you're not learning through putting something together and having it not work and then taking it apart. As you know, I don't love circuits but it's easier to learn on TinkerCad. I like learning with code blocks, it just seems like such a simple program and an easy way to learn and to get a grip on what we're learning. I wish we could have done TinkerCad first then gone to the physical breadboard.
